1ST INTERNATIONAL SYMPOSIUM ON EMERGING TRENDS IN SOFTWARE METRICS

The 1st International Symposium on Emerging Trends in Software Metrics (www.xp2009.org/etsm2009), held within XP 2009 conference, is aimed to report and discuss recent advances in the new field of software product and process metrics derived from complex network theory and in general from theoretical physics studies. Symposium topics cover also the measurement of size, effort and quality of software developed in innovative ways, and namely using agile methodologies and open source projects.

SCALING AGILITY

Can Agile Scale? Yes, of course it can! Agile is now moving to large software organizations around the world. Agile is an attitude, it is in everything, it is applied to everything - new software as well as legacy. It concerns everyone from the bottom to the top, and everyone will be impacted as you roll-out agile to your organization. Agile is not a patch to your old methodology, it penetrates everything you do. Changing these large companies and organizations starts with the people. It happens in an evolutionary way over a number of projects, practice by practice, beginning with your existing ways of working.
