

Workshop “Remote Microscopy for Electron Microscopy”

Location

Sardegna Ricerche
Auditorium, Edificio 2
Località Piscinamanna
09010 Pula (CA), Italy

Description

On the next 20-21-22 October, 2008, the workshop “**Remote microscopy for electron microscopy**” will be held inside the Scientific and Technological Park of Sardinia.

The workshop will deal with the next-to-come communication networks, their architecture and protocols to depict the development of advanced cooperative ambients. In particular, Electron Microscopy plays the role of the ideal test bench for any new solution.

The workshop program will then include the live comparison between real experiences about remote control, through discussions about the solutions implemented and live demos. Even the perspectives of Virtual Microscopy will be explored.

The event is scheduled along three thematic days, and is based on the participation of the major national and international experts in the field.

Attendance is allowed and is free of charge, but is limited to a very restricted number of accesses, because of the logistics of scheduled experiments.

On-line pre-registration is then mandatory.
