

FOR YOUR INNOVATION

We guide businesses, organizations,
and public administrations in the innovation process
that leads to competing, growing, and fostering the
entire Sardinian society.

Shaping Sardinia ecosystem innovation.

LOOKING TOWARDS THE FUTURE

We are the regional agency representing the innovation system in Sardinia since 1985. Since then, we have been focusing on technological progress and stimulating the creation of new entities and innovative companies capable of improving the territory and the lives of its inhabitants.

We are passionate. Through dialogue with citizens, public administrations, professionals, and students, we strive to glimpse the future by investing in ideas and building networks. We do this within our spaces, those of the Scientific and Technological Park of Sardinia, but above all outside, in contact with the realities that make up the nodes of that network. Together, we are the engine of Sardinian innovation.

INNOVATION SYSTEM

We work alongside companies on the island to accompany them throughout their journey, from startup to development, from growth to internationalization. We enhance their competitiveness in the public procurement market and collaborate with institutions, universities, and research centers. On behalf of the Sardinia Region, we manage a significant portion of European funds from the ROP Sardegna ERDF for innovation.

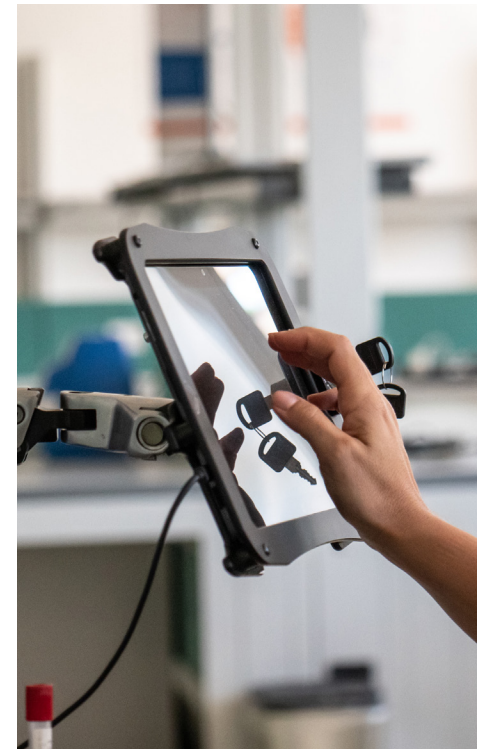

We promote public-private partnerships for the implementation of complex projects and innovative tenders in the field of industrial research, experimental development, technology transfer, and knowledge dissemination. We focus on the future of Sardinia.

We support public administrations present in the regional territory in the management of

funded programs and structural funds, in the implementation of projects, as well as in their monitoring and reporting. We are committed to ensuring that regional public spending is leveraged to revitalize the island.

We enthusiastically support research through collaboration with the University of Cagliari and the University of Sassari, valuable partners for understanding the world we live in.

We manage and promote the Science and Technology Park of Sardinia alongside its public research centers [or those in which Sardegna Ricerche participates]: CRS4, Porto Conte Ricerche, and the IMC Foundation - International Marine Centre. In our spaces, researchers and companies find state-of-the-art equipment and laboratories, as well as a wide range of specialized services.

EXPERTISE AND PASSION

We provide assistance, information, and training through our helpdesks:

Business Procurement: assistance to companies that intend to enter and establish themselves in the public procurement market.

European Research: support for participation in European programs supporting research, innovation, and entrepreneurship.

Intellectual Property: specialized services for the protection of intellectual property, patents, and trademarks.

Startups: guidance and support for the development of Sardinian startups.

Public Administration: support for administrations to enhance planning, management, and monitoring skills in public spending.

We also provide assistance through networks and innovation platforms, which enable research and knowledge transfer. These include the **Biomed Platform, Circular Economy, Renewable Energy, and the Enterprise Europe Network - ELSE.**
